

SL No	Question	Answer
1	what is navigation tag and when to user it ?	The <nav> tag is used for declaring the navigational section in HTML documents. Websites typically have sections dedicated to navigational links, which enables users to navigate the site. These links can be placed inside a nav tag. In other words, the nav element represents a section of the page whose purpose is to provide navigational links, either in the current document or to another document.
2	like this ./	The path depend on the image location. you can have ./ single or double or furthure nested. It completey depends on the image location.
